Display a YouTube video using Add Multimedia in Lessons

In **Lessons,** click on the **Add Multimedia** button.

- In the URL box, paste your YouTube web address or other video web address.
- Click **Save**. Your YouTube video will display.

Tip: Some types of videos will not display in Chrome and/or Firefox, in that case, create a link to your video, as described below.

Link to a YouTube (or other) video in Lessons

You can add a *link* to a YouTube video in Lessons (using Add Text), plus you can link to a video in your Syllabus, Resources, and the Home page, wherever you find a Text Editor.

In **Lessons**, click on the **Add Text** button.

- Click where you want your link to display and paste your YouTube web address
- *Highlight/Select your web address* and click on the **link** tool on the toolbar
  - In the *Link* box, in the URL box, **paste** your web address again, click **OK**.
- Click **Save** to save the changes.

Provide a link to your video's script in Lessons

In **Lessons**, click on the **Add Text** button.

- Below the video link or video displayed, you can type something like this:
  - "Click on this link to the video script (it will open in a new web browser tab):"
- *Highlight* some of the words you just typed, such as: "link to the video script", then click on the **link** tool on the toolbar
  - In the *Link* box, click on **Browse Server** or **Choose File** button
  - On the *bottom*, click on the **Browse** button, find/click on your script file, click **Open**
  - On the *right*, click on the **Upload** button
    - The name of your script file will show up in the *middle* of the screen, click on the **script name;** you'll now return to the Link box
  - Click **Save**.
